SUMMARY

With 4+ years of experience, I specialize in backend development across the Banking and Tour & Travel domains, including enterprise-grade version management platforms. I focus on system design, integrations, and delivering high-quality, cost-efficient solutions.

EDUCATION

PUNJABI UNIVERSITY, PATIALA
MSc in Information Technology
July 2022 | CGPA: 8.17

PUNJABI UNIVERSITY, PATIALA
BCA
July 2020 | CGPA: 7.01

TECHNICAL SKILLS

PROGRAMMING
Java • TypeScript • JavaScript / Node.js • SQL • PL/SQL • HTML5 • CSS3

FRAMEWORKS
Spring Boot • J2EE • Servlet / JSP • Express.js • React.js • XML

DATABASES
Oracle • MySQL • SQLite • MongoDB • Redis

AWS SERVICES
Lambda • Batch • SQS • SNS • S3 • EC2 • DynamoDB • OpenSearch / Kibana

FAMILIAR
Unix / Linux • Android with Java • MongoDB • XML • JSON • Grafana

PROJECTS

TECH BLOG | Java JSP Servlet

STORYBOOKS | MERN, Google Oauth
Live: storybooks.com
GitHub: semantic-void/StoryBooks

EXPERIENCE

Intellect Design Arena Limited | Pune, Maharashtra
SOFTWARE ENGINEER
November 2025 | Present

- Working as a Backend Developer in the Wholesale Banking and Trade Finance domain, contributing to enterprise-grade transaction banking solutions for international customers.
- Contributing to backend development of trade finance systems like Letter of Credit, Outward Guarantee, Inward Collection etc using Java, Spring Boot, and AWS.
- Built a counterparty onboarding portal's backend for a client bank in Java and Spring Boot, including a custom email system (XML via queues and SFTP, HTML in the UI) with routing logic across 12+ cases for over 50+ alerts.

AlgoDomain Solutions | Pune, Maharashtra
SR. SOFTWARE ENGINEER
July 2022 | July 2025

- Developed core components of a version management system using event-driven architecture, contributing throughout the development lifecycle as a Java developer.
- Developed and optimized an Airline Reservation System using Java, Spring Boot, Node.js, TypeScript, AWS, OpenSearch, and Grafana.
- Created a version migration tool for the banking sector, featuring automated dependency updates and Git operations, using Java Spring Boot, Maven, OpenRewrite, TypeScript, Next.js, and Next UI.

ACHIEVEMENTS AND CONTRIBUTIONS

- Reduced costs by 20% through log optimization and eliminated 80% of redundant flight logs in AWS OpenSearch.
- Optimized Redis caching architecture and documented improvements with detailed analytics.
- Increased bookings by 10% through the integration of new airline partnerships and round-trip features.
- Implemented key modules of a version management system leveraging event-driven architecture.
- Developed a Java Spring Boot Lambda and Batch for an ETL (Extract, Transform, Load) process, enabling seamless data transfer from OpenSearch to PostgreSQL, improving data accessibility and analysis efficiency.
- Developed and worked on Java and TypeScript Lambdas for flight booking, from search to reservation, enhancing user experience and performance.
- Thoroughly examined the caching architecture with a focus on optimization and reverse engineering, providing clear insights for higher management through detailed reports and charts.
- Designed a version migration tool that seamlessly transitions dependencies and code, catering to both front-end and back-end needs.
